

FISMA Quick Start Assessment

DESIGNED & DEPLOYED BY PLANET TECHNOLOGIES

OVERVIEW

FISMA defines three security objectives for information and information systems:

- ✓ **Confidentiality**
 - ✓ **Integrity**
 - ✓ **Availability**
- (44 U.S., Sec. 3542)

The FISMA Cycle

The Planet Difference

Planet understands the driving issues and concerns that agencies face today. To each engagement we bring a proven track record with civilian and defense agencies, extensive planning and implementation experience, and the passion to help your agency succeed. Our combination of state-of-the-art methodologies, flexible solutions, and expertise in Microsoft best practices enables our professionals to help your agency meet your critical challenges rapidly, keep you in the forefront of technology, and maintain the operational excellence that is the hallmark of top performing organizations.

Prepare for the Inspector General with a FISMA Assessment

The implementation of the Federal Information Security Management Act (**FISMA**), as defined in NIST publication 800-53, requires federal agencies to define security policies and procedures, software and hardware configurations, and establish a monitoring and reporting system to demonstrate compliance.

Deriving the methodology for an agency to achieve compliance can be a labor intensive and time-consuming task for agencies' IT staffs.

Planet Technologies' FISMA Quick Start Assessment

Planet Technologies has developed a three-week, fixed cost FISMA Assessment that fulfills the requirement within FISMA for independent annual testing of a representative sample of systems and simultaneously provides task driven weakness mitigation planning that demonstrates a proactive, planned approach to the Inspector General.

The Benefits

- Pilots and assists in the deployment of procedures, software and hardware solutions to mitigate identified material weaknesses
- Produces a task-driven project plan to mitigate security issues still outstanding for delivery to Inspector General during next review period
- Guides policy makers in defining or honing Cyber Security policy
- Accelerates transition from policy into actionable, best practice, task driven and documented procedure
- Transfers knowledge to your staff and provides a methodology they can repeat
- Fixed-price, fixed scope activity targeting a flexible representative sample of your systems
- Short engagement model, three-weeks to completion

Planet Technologies' FISMA Assessment

At the conclusion of Planet's FISMA Assessment, your agency will have a clear understanding of the legislation within FISMA, how it applies to the systems within scope and how the methodology can be applied across the agency. In addition, those activities that require immediate action are made clear and assistance can be rendered in drafting or modifying security policy documentation.

Kick start the translation of your requirements and legislative imperatives into a solid, task driven and manageable security plan with the Planet Technologies FISMA Assessment.
