### **Deploy Live@edu And Learn How to Manage It In Weeks with Planet Technologies**

Microsoft has introduced Windows Live@edu which provides higher education institutions with a suite of **FREE** hosted communications services for students, alumni and applicants. The Windows Live@edu program brings email – with your institutions own domain name, 2 GB mailboxes with spam and virus protection and bonuses such as blogging and instant messaging services – to colleges and universities around the world. MSN hosts the email, however, your institution maintains control; you create, delete and store all email addresses.

Effective implementation of your Windows Live@edu deployment can be a time-consuming and difficult task. To assist institutions with this program, Planet Technologies has created Ready to Deploy Live@edu, a fixed time and fixed price solution which leverages the skills and expertise of the Planet Technologies consulting team and eliminates the complex and time consuming process of designing and planning for deployment.

### **Ready to Deploy – Live @edu**

Planet's Ready To Deploy (RTD) Live @edu Solution will have your institution up and running with this service in weeks. Our solution is built leveraging Microsoft's Identity Integration Server (MIIS) to synchronize student account information between Active Directory and Windows Live. When new students are added, FREE mail accounts will be automatically provisioned at Windows Live. **We not only help with your initial sync but provide a system for ongoing identity management activities.** Our solution includes the architecture, tools and services your organization needs to rapidly deploy your hosted platform.

### **All Ready To Deploy Solutions Include:**

- A fixed time, fixed cost engagement model
- Installation and configuration of solution
- Knowledge transfer – one-on-one, hands-on training by our consultants to get your team up to speed on the solution
- Pre-define deployment architectures
- Standard project deployment plans

**Eliminate the complex and time consuming process of synching your directories in order to benefit from Microsoft's Live@edu service. Call Planet Technologies today.**
